This document describes the HTTP API ROUTES for the projects that can be created in the test plataform TESTFLOW.

Create a project

Creates a project and returns its generated identifier and name.

Request

```
POST /projects HTTP/1.1
Content-Type: application/json
Content-Length: 37
Host: localhost:8080

{"projectName":"Documented project"}
```

Path	Type	Description
`projectName`	`String`	Name of the project

Response

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: 80

{"id":"ba176bec-8b7e-4093-ad41-d32fc969e70c","projectName":"Documented project"}
```

Path	Type	Description
`id`	`String`	Unique identifier of the project
`projectName`	`String`	Name of the project

List projects

Returns all projects.

Response

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: 386

[{"id":"7756e51c-5677-4e10-8bab-
8cebcbd0cb3b","projectName":"TestFlow"},{"id":"df365d69-8ff7-4eb2-9e6c-
5a388626dda0","projectName":"Project details"},{"id":"ba176bec-8b7e-4093-ad41-
d32fc969e70c","projectName":"Documented project"},{"id":"d89ce868-8147-4f5f-b835-
c6fa9360d64e","projectName":"Listed project"},{"id":"3e206c97-1974-4dd3-9845-
6e8d3e8bf41c","projectName":"Updated project"}]
```

Path	Type	Description
`[].id`	`String`	Unique identifier of the project
`[].projectName`	`String`	Name of the project

Get a project

Returns a project by its identifier.

Path parameters

Table 1. /projects/{id}
